

The Honorable Donald Trump
President of the United States
The White House
1600 Pennsylvania Avenue NW
Washington DC 20500

September 5, 2019

Dear President Trump,

No matter how you feel about global warming, there's no escaping reality that our planet's oceans are heating up. It is a trend dating back to 1910, when William Howard Taft was the United States President. Today, the elevated ocean temperatures are resulting in more and more devastating global events.

Solar, wind, geo-thermo, and nuclear power are all viable long term solutions in reducing the carbon footprint of today's 7.7 billion people, but if you want to serve the boiling spaghetti *al dente,* you simply have to turn down the heat.

Much in the same way a solar eclipse gives a dose of unexpected nighttime to our biosphere while briefly lowering temperatures, setting up a few space umbrellas orbiting above our oceans would create much needed cooling areas. These solar powered apparatuses could be designed to open, close, and relocate, all the while cooling our planet.

Sincerely,

cc: President Trump, United States, Secretary General Guterres, United Nations; President Macron, France; Prime Minister Johnson, Britain; Chancellor Merkel, Germany; Administrator Wheeler, EPA, USA

Donathan Salkaln
